

SYSTEMIC C™

Enhanced, Non-Acidic Vitamin C For Superior Antioxidant Protection

Vitamin C is surely one of the most important nutrients for our health. Its powerful antioxidant qualities support our skin, bones, metabolism, and immune function; it supports our hearts and cardiovascular systems and helps healthy aging. Source Naturals now introduces SYSTEMIC C, an enhanced, upgraded vitamin C for even greater antioxidant benefits.

The unique blend of nutrients in SYSTEMIC C is designed to reactivate and recycle vitamin C in the body to provide increased antioxidant activity. Compounds including alpha-lipoic acid, N-acetyl cysteine, quercetin, and grape seed extract add additional antioxidant protection for your body. The vitamin C in this formula is a non-acidic form, calcium ascorbate, a great benefit to all who have sensitivities to ascorbic acid.

Source Naturals is pleased to present you with SYSTEMIC C, the non-acidic vitamin C, with enhanced antioxidant activity.
