SOURCE NATURALS INTRODUCES EDTA

Heavy Metal Detoxification

Scotts Valley, Calif. - Source Naturals is pleased to introduce EDTA (ethylene diamene tetra-acetic acid), an amino acid-like compound that influences the excretion of heavy metals from the body. EDTA is available from Source Naturals in a convenient capsule that contains 500mg of calcium disodium EDTA.

Source Naturals National Science Educator and spokesperson, Guy Devin Ph.D. says, "The body is constantly trying to cleanse itself of toxic heavy metals, which, through accumulation, can trigger metabolic inflammation and a myriad of health concerns. EDTA works by binding with divalent and trivalent metal ions for removal from the body through the lower GI tract or through the urine."

Lead, mercury, arsenic, iron and zinc are just some of the heavy metals that may accumulate in our bodies with age. Heavy metals and environmental toxins are absorbed throughout our bodies and mucosal tissues and inhaled through the air we breathe. EDTA is shown in studies to be an effective chelating agent for cleansing of heavy metals.

The liver is responsible for detoxifying and eliminating thousands of toxic foreign chemicals and pollutants from our body that have never before existed. In the face of this unprecedented assault, it makes good sense to develop a chelation strategy to work in conjunction with the detoxification function of the liver.

Source Naturals has identified twelve SystemiCare™ deep metabolic systems that are important for your health. EDTA, through its heavy-metal binding properties, supports the functions of Liver/Detox, one of the most critical of the SystemiCare foundation systems.

The suggested retail price for Source Naturals EDTA is, \$9.98 for 60 capsules, \$18.50 for 120 capsules, \$34.98 for 240 capsules.
